

CPSC 304 Project Cover Page

Milestone #: ____1____

Date: ____Feb.9th 2025____

Group Number: ____8____

Name	Student Number	CS Alias (Userid)	Preferred E-mail Address
Brian Lee	57421042	briacool	leebrian1239@gmail.com
Devon Wu	34556357	hxnfb	devonwu40@gmail.com
Sam Zhuang	55113682	zzhuan12	mr.samzhuang@gmail.com

By typing our names and student numbers in the above table, we certify that the work in the attached assignment was performed solely by those whose names and student IDs are included above. (In the case of Project Milestone 0, the main purpose of this page is for you to let us know your e-mail address, and then let us assign you to a TA for your project supervisor.)

In addition, we indicate that we are fully aware of the rules and consequences of plagiarism, as set forth by the Department of Computer Science and the University of British Columbia

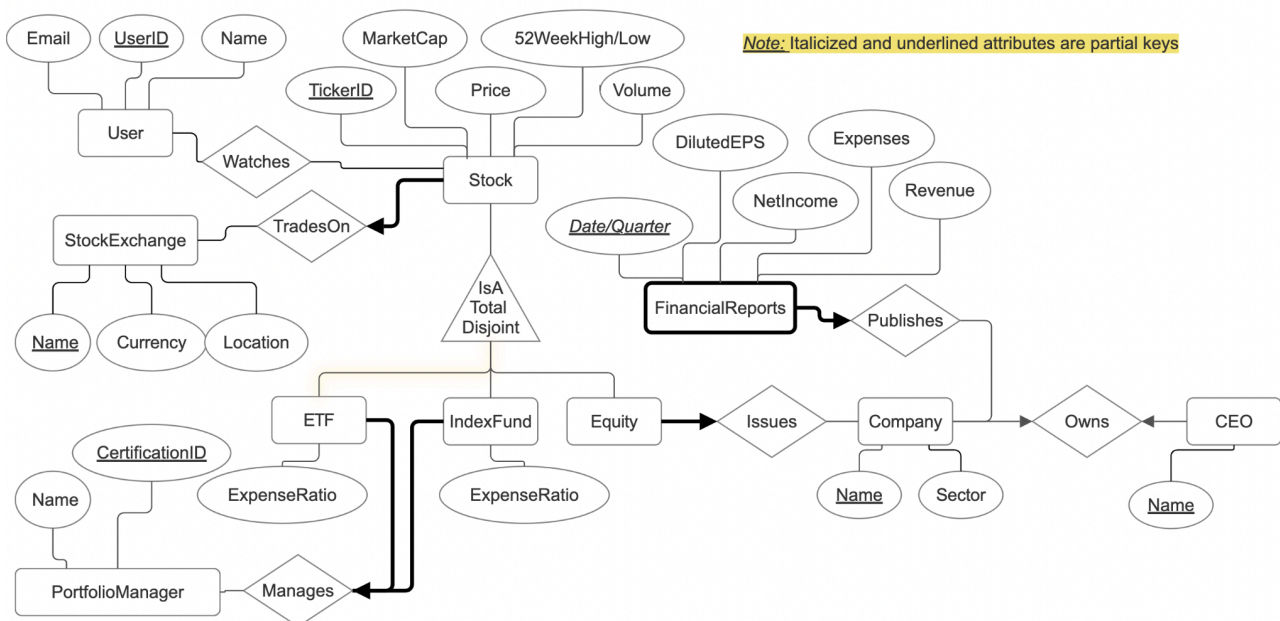

Project description:

The domain of the application is stock market tracking. The goal of the application is to allow users to have easy access to important information relevant to a particular stock or index fund. Consequently, the aspects of the domain that are modeled by the database include ticker symbols (IDs), current prices, volume of trades for a given stock, market cap, company information and news, financial reports, and more. A real life situation example: a user is interested in company X, and the application can provide relevant information about the stock of company X such as its price, its previous financial reports, and recent news in order to inform the user's decision to invest in company X.

Database Specifications:

The database will allow users to view stocks, index funds, or ETFs that are being traded on a sample market. The database will have up to date information on these stocks including trading value, volume, market cap, relevant news, and financial reports. Additionally, users will be able to add stocks to a "watchlist" for easy access and monitoring of stocks that they may be interested in. Finally, users can choose to get automatic alerts when a stock reaches a certain price.

ER diagram:

Application Domain: Primarily stock market information, that is arranged such that most of the commonly sought after info is grouped in one place so a user can view changes easily.
